📍 Berlin, Germany

Result-driven and curious data scientist with expertise in Python and NLP. Eager to leverage my skills to create innovative solutions and to extract actionable insights for business decision-making. Proven ability to collaborate effectively across cross-functional teams and translate complex data into clear, impactful outcomes.

Experience

Data Scientist

January 2024 – February 2025

Berlin, Germany

Informed - Ai for Journalism

- Led end-to-end development and deployment of data products, from data preparation to model deployment and fine-tuning models to personalize content recommendations for journalistic applications.
- Deployed an ai-powered tool for title, teaser, and headline generation, streamlining editorial workflows and reducing content creation time.
- Worked on deployment pipelines on Google Cloud Platform (GCP) to ensure model integration with editorial workflows.
- Applied data modeling and retrieval techniques such as Retrieval-Augmented Generation (RAG) to create personalized newsletters, enhancing engagement and boosting content relevance.

skills: Python, HuggingFace, Google Cloud GCP, FastApi

Data Scientist

August 2021 – October 2023

Berlin, Germany

Tucan.ai GmbH - Meeting Assistant Software

- Joined tucan as the first data scientist, communicated closely with stakeholders from various perspectives, worked directly with the CTO and partnered with engineers and product owners.
- Implemented a meeting summarisation model using data from meeting transcripts, to extract relevant information and generate concise summaries, improving productivity, facilitating decision-making processes.
- Developed and implemented a Q&A model for meeting discussions that effectively addressed questions and improved overall comprehension; achieved a 70% accuracy rate and reduced meeting time by 30%.

skills: Python, HuggingFace (Bert, T5, GPT)

Research Assistant | Deep Learning

May 2020 - December 2020

Strasbourg, France

ICube Laboratory - University of Strasbourg

- Conducted Exploratory Data Analysis (EDA) on 4 large remote sensing data sets, each comprising 30k to 50k images per class. Used analytical techniques to gain deep insights into the data, enabling informed decision-making on class selection and feature prioritization.
- Assessed in writing deep learning models to classify large unlabelled data sets using features learned from smaller labeled data sets, attaining 78% accurate results. The results are referenced in an ongoing research paper. (Domain Adaptation)
- Increased the accuracy by 3% by developing and documenting the model's architecture and the data preprocessing steps.

skills: Deep Learning, Gradient Boosting, XGboost

Education

Higher School of Communication of Tunis (SUP'COM)

2017 - 2020

Tunis, Tunisia

Master's Degree in Information and Communication Technologies Engineering

- Major: Machine Learning & Data Science
- Minor: Management of Innovation and Technology

Technical Skills

- **Programming Languages:** Python, SQL
- **Libraries/Frameworks:** NumPy, Pandas, Scikit-learn, spaCy, NLTK, Matplotlib, Jupyter, Pytorch, Seaborn
- **Tools:** GCP, Git, MLflow, Docker,

Languages

Fluent in English and French; Native in Arabic; Basic proficiency in German (A2)
