

Ferdaous Bouzaiene

Data Scientist

+491744309905 @ferdaous.bouzaiene@gmail.com in/ferdaousbouzaiene/ Berlin, Germany

SUMMARY

Organized and results-driven data scientist with of experience using Python and LLMs to transform complex ideas into actionable insights. Skilled in clear communication, structured problem-solving, and cross-functional collaboration to deliver impactful outcomes.

EXPERIENCE

Data Scientist

Informed.ai - AI-driven content platform for newsrooms

01/2024 Berlin, Germany

- Led end-to-end development and deployment of data products, from data preparation to model deployment and fine-tuning models to personalize content recommendations for journalistic applications.
- Deployed an AI-powered tool for title, teaser, and headline generation, streamlining editorial workflows and reducing content creation time.
- Worked on deployment pipelines on Google Cloud Platform (GCP) to ensure model integration with editorial workflows.
- Applied data modeling and retrieval techniques such as Retrieval-Augmented Generation (RAG) to create personalized newsletters, enhancing engagement and boosting content relevance.
- Skills: Python, HuggingFace, Google Cloud GCP, FastAPI, RAG, Langchain

Data Scientist

Tucan.ai GmbH - Meeting Assistant Software

08/2021 - 10/2023 Berlin, Germany

- Joined as the first machine learning engineer at Tucan.ai, leading the development of ML projects while collaborating directly with the CTO, engineering teams, and product stakeholders to define AI strategy and implementation
- Implemented and deployed a meeting summarization system using T5 to automatically extract key insights from meeting transcripts, improving workflow efficiency
- Developed a Q&A model for meeting analysis that addressed questions and improved overall comprehension; achieved a 70% accuracy rate and reduced meeting time by 30%
- Skills: Python, HuggingFace (BERT, T5, GPT)

Research Assistant - Deep Learning

ICube Laboratory

05/2020 - 12/2020 Strasbourg, France

- Conducted comprehensive Exploratory Data Analysis on 4 large-scale remote sensing datasets containing 30k to 50k images per class.
- Applied statistical and visualization techniques to identify optimal class selection and feature prioritization and engineering strategies.
- Assessed in coding deep learning models for classifying unlabeled remote sensing data using knowledge transfer from smaller labeled datasets, achieving 78% classification accuracy with results contributing to an ongoing research publication.
- Improved model performance by 3% through architecture optimization and data preprocessing. Documented methodologies and implementation.
- Skills: Transfer Learning, EDA, Image classification, Neural Networks

EDUCATION

Master's Degree in Information and Communication Technologies Engineering

Higher School of Communication of Tunis (SUP'COM)

2017 - 2020 Tunis, Tunisia

Data Science & AI Course

Le Wagon

07/2025 - 09/2025 Remote

- Built on prior data science experience through Le Wagon's Data Science & AI bootcamp, enhancing skills in time series analysis, regression modeling, computer vision, recommendation systems. Gained hands-on experience deploying full-stack ML solutions using scikit-learn, TensorFlow, SQL, and Google Cloud Platform, alongside conducting A/B testing and performance analysis.

SKILLS

Python | NumPy | PyTorch | Scikit-learn | XGBoost | HuggingFace | NLTK | Pandas | Matplotlib | Jupyter

SQL | BigQuery | Docker | Google Cloud | FastAPI | Git | GitHub | MLflow | Langchain
